

Environment Program

STRATEGIC OVERVIEW

Working with the power of nature to reduce the impacts of climate change on rivers, oceans, and communities

We believe that when people care for nature, nature takes care of people.

Our Approach

People and communities thrive when we invest in water.

We work to support change in our systems so that communities, companies, governments, investors and other decision makers are focusing more on working with the power of nature to protect water – our most precious natural resource.

The Big Questions of Our Work

Nature has the power to heal itself and take care of people if we let it work.

We are asking big questions alongside grantees and communities about protecting water in the face of climate change.

SUPPLY CHAIN

How can we incentivize companies to take greater responsibility for nature?

WATER POLICY

How can we find solutions so people and nature have water thrive?

SMART FINANCE

How can we find innovative ways to help pay for the work that needs to be done?

MAKE IT EASIER

How can we empower communities to bring new ideas around nature and water to decision makers at all levels?

What we hope to accomplish

Communities are facing many issues as a result of climate change, and nature can be part of the solution.

We can look to nature to help address drought, flooding, declining ocean health, and more.

We work toward a landscape with these solutions and activities:
